Introduction

A restaurant's website should reflect the customer service it offers guests. It should be more than a neat extension of their physical location and it needs to answer all the questions, would-be customers have.

We believe a restaurant website should have information customers are looking for. Customers should be able to

1. Book a table via email or by telephone.
2. Find contact details easily.
3. Checking opening hours
4. Find the restaurant's location
5. Look at the restaurant's menu
6. Check for offers and special events.

Goals and objectives of the project

Goal:
By the end of the project, every member of the team will have completed their assigned tasks in creating a complete web application.

Objectives:
- To build a highly responsive web application that will make it easier for users to use the web application.

- To build a web application to help restaurants gain more reach and attract more customers through search engine recommendations.
- To build an application that will make it easy and convenient to reserve a table and/or place an order for food.
- To build a system that will provide access to a restaurant's menu.
